

Description

This Plugin enables Woo Commerce shop owners to get direct and instant payments through UPI apps like BHIM, Google Pay, Whatsapp, Paytm, PhonePe or any banking UPI app to save payment gateway charges in India.

DETAILED STEPS

- Customer will see UPI as a payment option in Woo Commerce Checkout page.
- When customer chooses it, it will open a page which shows the UPI QR Code containing the payment details and in mobile it will also show a button which takes customer to the list of installed UPI mobile applications.
- Customer can choose an app from mobile to pay the required order amount.
- After successful payment, a 12-digits Transaction/UTR ID will appear in the Customer's UPI app from which he/she made the payment.
- After that, customer needs to enter that 12 digit transaction number to the "Enter the Transaction ID" textbox and click submit.
- After successful submission of the ID, the order will be marked as on hold (customizable).
- Now, Merchant gets a notification on the mobile on his/her UPI app (Google Pay/Phone Pe/BHIM/Paytm etc.)
- Merchant opens notification, sees a payment made. Sees the "Order ID".
- Merchant opens the Woo commerce Dashboard, checks the "pending orders" for this Order ID.
- Checks the order details and processes it (shipping etc) and makes the orders as "processing" or "completed"
